

MAIScut

Circular sawblade for fibre cement boards

High Performance

Choosing the right tool is key to guaranteeing an excellent quality finish when cutting fibre cement products. Produced with the support of the latest generation equipment, FREZITE has developed a circular saw blade specially designed for cutting this range of materials. The special body shape and its cutters ensure a clean cut and a long lasting tool life, so the MAIScut saw guarantees high profitability and economy.

Compared to traditional cutting (abrasive disc), the FREZITE MAIScut ensures a reduction in waste improving the atmosphere at the work location and protecting the health of its users.

When the cut is being made with a portable machine, the good side of the board must be placed face down.

For machines using a saw from below, the good side must be placed facing up.

APPLICATIONS

- For cutting of cement composite boards (ex. Eternit, etc.).

MACHINES

- For sliding table saws machines, table saws, portable machines, etc.

TECHNICAL INFORMATION

- With triple chip grinded polycrystalline teeth (DP).
- Special design body.

ADVANTAGES

- Faster cutting speed.
- Excellent finish.
- Significant reduction in dust waste.
